

To keep your PC and network up and running all the time, just follow this recommended maintenance schedule. Let our certified pros perform any of the following services for you.

Data Backup — Every month

- Data protection helps keep all your files safe. Whether it's pictures from a past vacation, important records or your MP3 collection, it's imperative that you back up your files every month. Let Staples EasyTech help you transfer your files to a safe device or online service.

System Security Check — Every three months

- Our System Security Check keeps you protected from outside threats. To ensure your machine is properly protected, get a System Security Check every three months through our System Analysis. Our tech experts will find out if your security protection software is doing its job.

PC Tune-Up — Every six months

- Let your PC perform at its best. Get a PC tune-up every six months and keep your system safe and clean from uninvited visitors like viruses, spyware and dust.

Wireless Network Security Check — Every six months

- Protect your network. Just because your network is working doesn't always mean it's secure. Let one of our experts run a diagnostic on your network to check your settings, configurations and security features.
